Greek Financial Crisis

Greece's economy has experienced financial and management crisis since 2009. While concerns concentrate on the sustainability of the country's debt, the crisis has resulted in the collapse of the Greek economy and adverse effects on the rest of Europe. The nation's debt level has increased to 170% of GDP, unemployment has tripled to 25%, and the economy cor racted to 25%. Despite interventions from other European governments, the Greece continues to experience serious economic challenges.

The Greece economic crisis has caused significant political upheavals in Europe. The collapse of the economy has evolved into a political crisis affecting mere European integration. Analysts believe that a debate between European governmenter precentatives about the appropriate crisis response in Greece has caused increased political tensions (Ardagna & Caselli, 2014). Other European countries publicly oppore the economic reforms viewed as an unjust imposition by other governments, which free political differences, and growing concern about the democratic legitimacy of European institutionals. For example, the political tension between Germany and France has a negrate prime to nEU countries. Additionally, the Greek crisis has exposed different issues on the institutional structure of the European whose members use common currency members and policy (Selvaraj, 2015).

The C. ek ciri bas led to a strained relationship between Europe and the United States. Since the begin, ing of interventions to solve the Greek economic crisis, European countries have show less concentration on key US-European policy priorities. European governments show less tocus on the policies such as cooperation on Russia sanctions and talks about the planned Transatlantic Trade and Investment Partnership (T-TIP) and the ongoing post-Ukraine conflict recovery (Ardagna & Caselli, 2014). The Greek crisis has also constrained Europe's

GREEK FINANCIAL CRISIS

effectiveness as a partner for the United States. Europe has been an important economic and political partner of the United States for many years. Issues regarding the Greek crisis have resulted in extensive efforts to save the nation thus jeopardizing the economic and strategic importance to its partners, especially the US (Selvaraj, 2015).

The ongoing Greece debt crisis has directly affected the economic performance or other European countries. Even though different countries in Europe have experienced dates on evels of economic performance, the Greek financial crisis has led to associated economic coession effects that have spilled over to other Eurozone members. Some of the related recession effects in the Eurozone include increased rates of unemployment, a decrease of QP to below pre-crisis levels and low productivity and competitiveness (Arghyrou & Tsot 'alas, 2011). Additionally, European banks possess high levels of debts and noncerte milling teams that result in the inability to provide credit, thus slowing down economic growth. There is to revive the Greeks economy have led to the increased burden to Eurozone core iters to Greece.

This paper has outlined the effects of the Greek financial troubles in the rest of Europe. Greece has been at the center of usis financial crisis since 2009. The adverse effects experienced by other countries in Europe are stributed to the efforts to save the Greek economy. The main troubles caused by the Greek crisis include political tensions among European countries, the strained relation ship between the Europe and the United States and the deteriorating economic perform, ce on the Europen.
